

UV-C Clean Air ProVent

A patented UV-C light air-treatment component for commercial HVAC systems.

Introducing a groundbreaking development in engineering that modifies vulnerable HVAC systems, effortlessly transforming them into purified air ventilation upgrades for individual spaces such as offices and conference rooms.

THE ISSUE

HVAC systems play a critical role in our environment's air circulation and control. Until now, they have been unsuccessful in removing the airborne pollutants and diseases which can cause sickness and discomfort. Building managers have been desperately seeking a solution that will provide a clean and safe indoor air quality, while also being economical and uncomplicated.

THE SOLUTION

Our exclusive Destiny UV-C ProVent was specifically designed for disinfecting the air we breathe to create sanitary and healthy surroundings. As air moves through its light-tight chamber, the UV-C lights eliminate all hazardous organic material, leaving our workspaces and offices more enjoyable and hygienic.

The system represents an advance in air quality management by effectively targeting and neutralizing airborne pathogens and contaminants as they pass through the air stream. By doing so, the system provides assurance of optimal air sterilization, enhancing the overall safety and air quality of the building environment.

Our revolutionary technology is the world's first ventilation duct that uses UV-C light.

THE FEATURES

- Self-contained UV-C light inside unit
- Installs with new & retrofit applications
- Cost-effective for protecting customers, staff, and employees from airborne viruses and organic pollutants
- Uses UV-C light to target and sterilize the air stream
 - Sterilization rate up to 99.9%
- No chemical residues
- No waste generation
- Option to run continuously or independently controlled within the room.
- UV-C Lamp life is 70,000 hours and easily replaced
- Low operating maintenance costs
- Available in a selection of powder coated finishes
