

# UV-C Pure Air Guard System

An unrivaled UV-C air-treatment system for residential and light commercial settings, compatible with all HVAC units, including heat pumps.

Introducing an impressive new advancement in air purification, designed to improve indoor air quality while being both economical and energy efficient.

## THE ISSUE

Our homes are our refuge. Typical residential HVAC systems do not protect us from airborne pollutants or disease, and in fact, only work to spread those contaminants throughout our entire household, creating an unsafe and unhealthy environment. Families are left completely exposed to harmful and infectious airborne impurities, causing prolonged sickness and distress. Loved ones with compromised immune systems, along with global epidemics are proof that resolution must be secured.

## THE SOLUTION

With our extraordinary system, not only is the air we breathe disinfected and sanitized using dual UV-C lights, unwanted odors are also removed. This unique system produces circulated air that is now clean and purified, a difference that will be immediately recognized by everyone.

This technology greatly assists in keeping our families and pets healthy and comfortable, allowing us to focus on other important items, including those holiday parties and bedtime stories. The UV-C Pure Air Guard System really is the peace of mind we've all been searching for.

## THE FEATURES

- UV-C dual bulb system
- Coverage 4,000 SQFT
- 70,000 Hrs. of life use
- Bulbs easily replaced
- Indicator light notifying system is in operation and when bulbs need to be changed
- Direct power or low voltage connections
- Sterilization rate up to 99.9%
- For Residential or light commercial areas
- Multiple systems can be added to cover greater square footage
- Capability to work with all units including heat pumps
- Removes all odor from area including not limited to pet, airborne pollutants, and disease
- Improves indoor air quality while being economical and energy efficient
